Maksym Grinyuk

C# / .NET Software Engineer

maxisoft4@gmail.com | +7 (900) 309-26-62 | t.me/Moximusss | maxisoft5.github.io/maxicraft | github.com/Maxisoft5

PROFESSIONAL SUMMARY

C# / .NET engineer with 6+ years of professional experience building APIs, background services, and AI-powered product features. Work with .NET 10, PostgreSQL, ClickHouse, Kafka, and Redis. Integrate LLMs, retrieval-augmented generation (RAG), and conversational AI into products, including meeting transcription and processing. Use Codex and Claude for development and orchestrate AI agents through task decomposition, planner-executor and supervisor patterns, parallel execution, and context management, validating changes through tests and code review. Contribute to system design and production operations; optimize SQL queries, caching, and data processing.

TECHNICAL SKILLS

Backend: C#, .NET 10, .NET 8, ASP.NET Core, REST APIs, HostedService, .NET Core, ASP.NET MVC, .NET Framework 4.8, WebSockets, gRPC, Kafka, RabbitMQ, Memcached, Redis, high-throughput real-time systems, data ingestion and processing

Data: SQL, T-SQL, PostgreSQL, SQL Server, ClickHouse, MongoDB, Elasticsearch; EF Core, NHibernate, LINQ2DB, Dapper, ADO.NET

AI / LLMs: LLM integration, RAG, embeddings, chunking, vector search, semantic and hybrid search, reranking, prompt engineering, context engineering, function and tool calling, structured outputs, JSON Schema, streaming responses, LLM evaluation, grounding, hallucination mitigation, token and cost optimization, speech-to-text, summarization

AI Agents / Development: Agent orchestration, agentic workflows, multi-agent systems, planner-executor and supervisor patterns, parallel execution, task decomposition, handoffs, context management, MCP (Model Context Protocol), human-in-the-loop workflows, iterative review and testing; Codex, Claude, Claude Code

Frontend: Blazor Server / WebAssembly, Angular, TypeScript, JavaScript, React, Vue.js, HTML5, CSS3

Testing: Unit, integration, regression, API, and end-to-end testing; xUnit, NUnit, MSTest, Moq, AutoFixture, FluentAssertions

DevOps / Cloud: Docker, Kubernetes, Azure Pipelines; Azure, AWS, Yandex Cloud

Architecture / Observability: Microservices, monolithic, onion, layered, and event-driven architectures, CQRS, DDD, SOA, MVC, MVVM; ELK, Grafana, OpenSearch, Application Insights; Git, Bitbucket, Jira, SOLID, IoC

PROFESSIONAL EXPERIENCE

Excite Kit / UXRocket | Full Stack .NET Engineer | Aug 2024 - Present

- Built a conversational AI assistant for product analytics, integrating an LLM with backend APIs, metrics, segments, and funnels. Orchestrated agents to retrieve context, invoke tools, and generate answers grounded in customer data.
- Implemented RAG for the assistant: document preparation and chunking, embeddings, semantic search over the product knowledge base, and source-linked answers. Managed LLM context and evaluated response quality.
- Applied LLMs to A/B testing to generate hypotheses and experiment variants, summarize metrics, and explain differences between groups using calculated experiment results.
- Used Codex and Claude for development and refactoring. Orchestrated agents with planner-executor and supervisor patterns, parallel tasks, and context handoffs; validated changes through tests and code review.
- Reworked Sankey user journey calculations and visualization, including transitions, breakdowns, and conversion windows, to help identify friction points and conversion drop-offs.
- Built a custom funnel component and supporting APIs with configurable steps, filters, breakdowns, and calculations to support customer-specific business processes.
- Added line, card, and bar views for funnels to explore trends, compare segments, and assess key metrics.
- Implemented CSV import and export for analytics workflows, enabling data and analysis configuration transfer, bulk setup, and further analysis in external tools.
- Extended LDAP / Active Directory authentication with group-to-role mapping, corporate account sign-in, and centralized access management.
- Redesigned the raw event data table with configurable columns and expandable attributes, enabling in-product event exploration, data validation, and tracking instrumentation troubleshooting.
- Expanded Rocket Play session replay with access from cohorts and analytics reports, connecting conversion drop-offs to the user interactions behind them.
- Optimized Rocket Play with dynamic and fixed sampling, priority retention of problematic sessions, and faster queries to support high-traffic customers and different storage budgets.
- Implemented billing-period quotas, usage and overage tracking, and storage and recording recovery charges for Rocket Play, supporting module monetization and differentiated pricing plans.
- Delivered paid MP4 exports of session recordings for research, presentations, and product discussions outside the platform.

Stack: C#, .NET 10, ASP.NET Core, HostedService, Hangfire, Blazor, Ant Design, MudBlazor, JavaScript, NHibernate, PostgreSQL, ClickHouse, Kafka, Redis, unit / integration / API / end-to-end testing, OAuth 2.0, Jira, Confluence, Rider, Bitbucket

DilyaSoft | Full Stack .NET Engineer | Oct 2023 - Aug 2024

- Built a Microsoft Teams bot that joined calls, recorded meetings, and transcribed speech to text, automatically producing searchable transcripts for subsequent processing.
- Built an agent-based transcript processing workflow for context retrieval, LLM summarization, and extraction of decisions and action items. Implemented RAG and conversational search over meeting recordings using chunking, embeddings, and semantic retrieval to ground answers in relevant transcript passages.
- Worked with clients to clarify requirements and deliver changes. Implemented contextual tooltips and interactive product tours, reducing time to value for new users by 70% and support inquiries by 50%.
- Built a content platform integrating the Telegram API, Telegram OAuth authentication, and user-generated content management; attracted 2,000+ active users in the first three months. Implemented XSS protection.
- Automated leave management with Timetastic webhooks, Teams / Slack notifications, and manager approvals. Cut processing time from 48 hours to under two hours and eliminated 15+ manual steps per request.
- Integrated Mastercard payments into an MVC application, including payment forms, 3D Secure, and PCI-compliant handling. Supported ongoing monthly transaction processing with no integration-related failures.
- Migrated and renewed SSL certificates in Azure App Service without production downtime. Used Application Insights logs to identify and resolve 50+ critical errors, reducing production incidents by 80%.

Stack: C#, ASP.NET MVC, Telegram API, Yandex API, Yandex Cloud, Azure Functions, .NET Framework 4.8, Code On Time, JavaScript, Razor, MongoDB, Azure Pipelines, Git, React, Visual Studio

Acuitive Solutions | Full Stack .NET Engineer | May 2022 - Jun 2023

- Developed an MVP portal for logistics audits with real-time tracking of waybills, invoices, statuses, and metrics, plus interactive tables and dashboards. Reduced manual invoice processing time by 80% for companies handling more than 10 million waybills per month.
- Built a standalone shipment tracking application with Google Maps integration, displaying cargo locations and delivery events in real time to support route analysis by auditors.
- Implemented role-based access control with granular audit data permissions and multi-tenant support for multiple customers within a single application.
- Built reporting with secure link-based sharing, Excel / CSV / PDF import and export, and email distribution, accelerating report preparation and delivery by 75%.

Stack: C#, .NET Core, ASP.NET Core, EF Core, SQL Server, Angular, JavaScript, Google Maps API, Azure Service Bus, Azure Pipelines

MedeAnalytics | Associate Software Engineer | Feb 2021 - Feb 2022

- Improved application stability and scalability by 20% by migrating a legacy monolith to microservices, moving from .NET Framework to .NET Core, and introducing asynchronous messaging with RabbitMQ and NServiceBus.
- Reduced customer-reported errors by 60% by expanding the test suite from 200 to 500 unit, integration, and end-to-end tests, updating the MongoDB driver, adopting TDD, and automating code quality checks with SonarQube.
- Reduced mean time to recovery (MTTR) by establishing centralized logging with the ELK stack (Kibana, Logstash) and metrics visualization in Grafana, accelerating production incident diagnosis.

Stack: C#, .NET Framework / .NET Core, MongoDB, Docker, RabbitMQ, NServiceBus, Kubernetes

iQueSoft | Junior .NET Developer | Apr 2020 - Feb 2021

- Implemented and tuned Elasticsearch, reducing average search response time by 20% and improving the property search experience.
- Developed a high-throughput backend API for dashboards.
- Integrated Mapbox to display detailed rental property information.
- Added Mustache.js email templates to improve property marketing and increase average lead generation.

Stack: C#, ASP.NET Core, Elasticsearch, Mapbox

EDUCATION & LANGUAGES

National Aerospace University "Kharkiv Aviation Institute" | M.Sc. in Computer Science, 2021 - 2022; B.Sc. in Computer Science, 2017 - 2021

Languages: Russian - Native; English - B2 (Upper-Intermediate).
